

PRESS RELEASE

**ROCHESTER ELECTRONICS SELECTED BY AVAGO TECHNOLOGIES AS
VALUE ADDED DISTRIBUTOR**

--Avago Customers Have New Source for "End-of-Life" Products--

NEWBURYPORT, Mass. – September 12th, 2007 – Rochester Electronics, the world’s leading authorized solution for aftermarket semiconductor support, announced today it has been selected as an authorized distributor by Avago Technologies, a leading supplier of analog interface components for communications, industrial and consumer applications. Rochester will help Avago Technologies’ customers continue to fill orders when products reach end-of-life status.

A value-added distributor, Rochester Electronics provides continuing customer service when suppliers discontinue products. Known as Leaders on the “Trailing Edge of Technology®,” Rochester’s focus is on the product’s end- of-life cycle that can cause problems for both the supplier and their customers.

“Every product and technology has a life cycle,” said Frank Robertazzi, Director of Channel Sales for Avago Technologies. “However, the end-of-life schedule for the manufacturer may not reflect the ultimate schedule of the customer. Partnering with Rochester enhances our end-of-life strategy and allows us to better serve our customers.”

Rochester’s founder and CEO, Curt Gerrish, adds, “Avago brings us the ability to provide a more complete package of discontinued semiconductors. Customers can now fill most requirements with one call. Quality from Avago Technologies has always been an industry given. Rochester’s quality programs and philosophy ensures product that meets this commitment. This is a significant addition to our product lines that will solve many customers’ needs at end of life and in the future.”

About Rochester Electronics

Founded in 1981, Rochester Electronics today offers the industry's most comprehensive support for aftermarket semiconductors. With an unmatched stock inventory and full manufacturing facilities, Rochester is the world's only company to be fully authorized by more than 40 leading semiconductor manufacturers to provide a reliable aftermarket source for discontinued products. Rochester is a privately owned and managed company. Its corporate headquarters, distribution and manufacturing facilities are located in the historic seaport community of Newburyport, Massachusetts. Sales offices are also located throughout the U.S, Europe and Asia. Information about Rochester is available on the Web at www.rocelec.com.

About Avago Technologies

Avago Technologies is a leading supplier of analog interface components for communications, industrial and consumer applications. By leveraging its core competencies in III-V compound and silicon semiconductor design and processing, the company produces highly efficient, high-quality products. With a global employee presence, Avago provides an extensive range of analog, mixed-signal and optoelectronic components and subsystems to more than 40,000 customers. Backed by strong customer service support, the company's products serve four diverse end markets: industrial and automotive, wired infrastructure, wireless communications, and computer peripherals. Avago's heritage of technical innovation dates back 40 years to its Hewlett-Packard roots. Information about Avago is available on the Web at www.avagotech.com.
